

## Assignment: Match CV with Job Description

**Goal:** Write a short Python script that reads a **CV (PDF)** and a **Job Description (PDF)**, uses **Gemini AI** to extract key details, and gives a **match score**.

### Steps

#### 1. Extract details with Gemini

- From CV → get: `name`, `skills`, `education`, `experience`.
- From Job Description → get: `required_skills`, `qualifications`, `experience_needed`.
- Output both in **JSON** format.

#### 2. Compare

- Match how many skills and qualifications overlap.
- Give a simple score from **0 to 100** (e.g., skill match 70%, education 20%, experience 10%).

#### 3. Output

- Print both JSONs.
- Print:

Suitability Score: XX / 100

### Deliverables

- A `.py` or `.ipynb` file
- Sample output showing extracted info and final score
